DETAILED ACTION

1. Claims 1-35 are presented for examination and claims 36-62 belong to application number 10/360,092.

Election/Restrictions

2. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-10 and 16-25, drawn to an apparatus for autonomous operation over an area having a drive system; and a controller in communication with said drive system, said controller including a processor programmed to provide at least one scanning pattern for a first portion of said area; analyze said first portion for an opening to a second portion of said area; and signal said drive system to move along a path at least proximate the periphery of said first portion to and through said opening to said second portion of said area, classified in class 700, subclass 260.
 - II. Claims 11-15, drawn to a nozzle for suction of particulates comprising: a body, said body including a first end and a second end, said first end including a neck, and said second end including an upper edge and a lower edge defining an opening therebetween; a lip extending at least substantially parallel to said opening along said upper edge and extending at least partially beyond said lower edge of said opening, said lip tapering upward from a portion of greater thickness to portions of lesser thickness, said lip configured for creating a

flow cavity to be formed with the floor or surface over which said nozzle traverses, classified in class 239, subclass 15.

III. Claims 26-35, drawn to an obstacle detection system for an autonomous cleaning machine, classified in class 700, subclass 245.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
